

# **THE TRAGEDY OF FLIGHT: A COMPREHENSIVE CRASH ANALYSIS**

## **1.INTRODUCTION**

Airplane crash analysis is a detailed investigation into the causes of an aviation accident. The goal of an airplane crash analysis is to identify any factors that contributed to the accident, with the ultimate goal of improving safety and preventing future accidents. The process of conducting an airplane crash analysis typically involves the collection and analysis of a wide range of data, including information about the aircraft and its systems, the operators, and any other relevant factors. This data is typically collected from Kaggle. Once the data has been collected, it is analysed through tableau, to identify any potential causes of the accident. The results of an airplane crash analysis are typically published in a report, which may include recommendations for improving safety and preventing similar accidents in the future. These recommendations may be implemented by the relevant authorities or industry organizations.

### **1.1-overview**

The investigation should include the gathering, recording and analysis of all available information; the issuance of safety recommendations, if appropriate; the determination of the causes, if possible; and the completion of a final report.

## 1.2-purpose

To effectively discover the hazards that led to the accident and to prevent their recurrence in a future accident or incident. In the course of that investigation, additional hazards which increased damage and injury (inadequate crashworthy systems, system safeguards, rescue team response, etc..).

## 2. PROBLEM DEFINITION& DESIGN THINKING

The define stage is preceded by the [empathize phase](#), where you'll have learned as much about your users as possible, conducting interviews and using a variety of immersion and observation techniques. Once you have a good idea of who your users are and, most importantly, their wants, needs, and pain-points, you're ready to turn this empathy into an actionable problem statement.

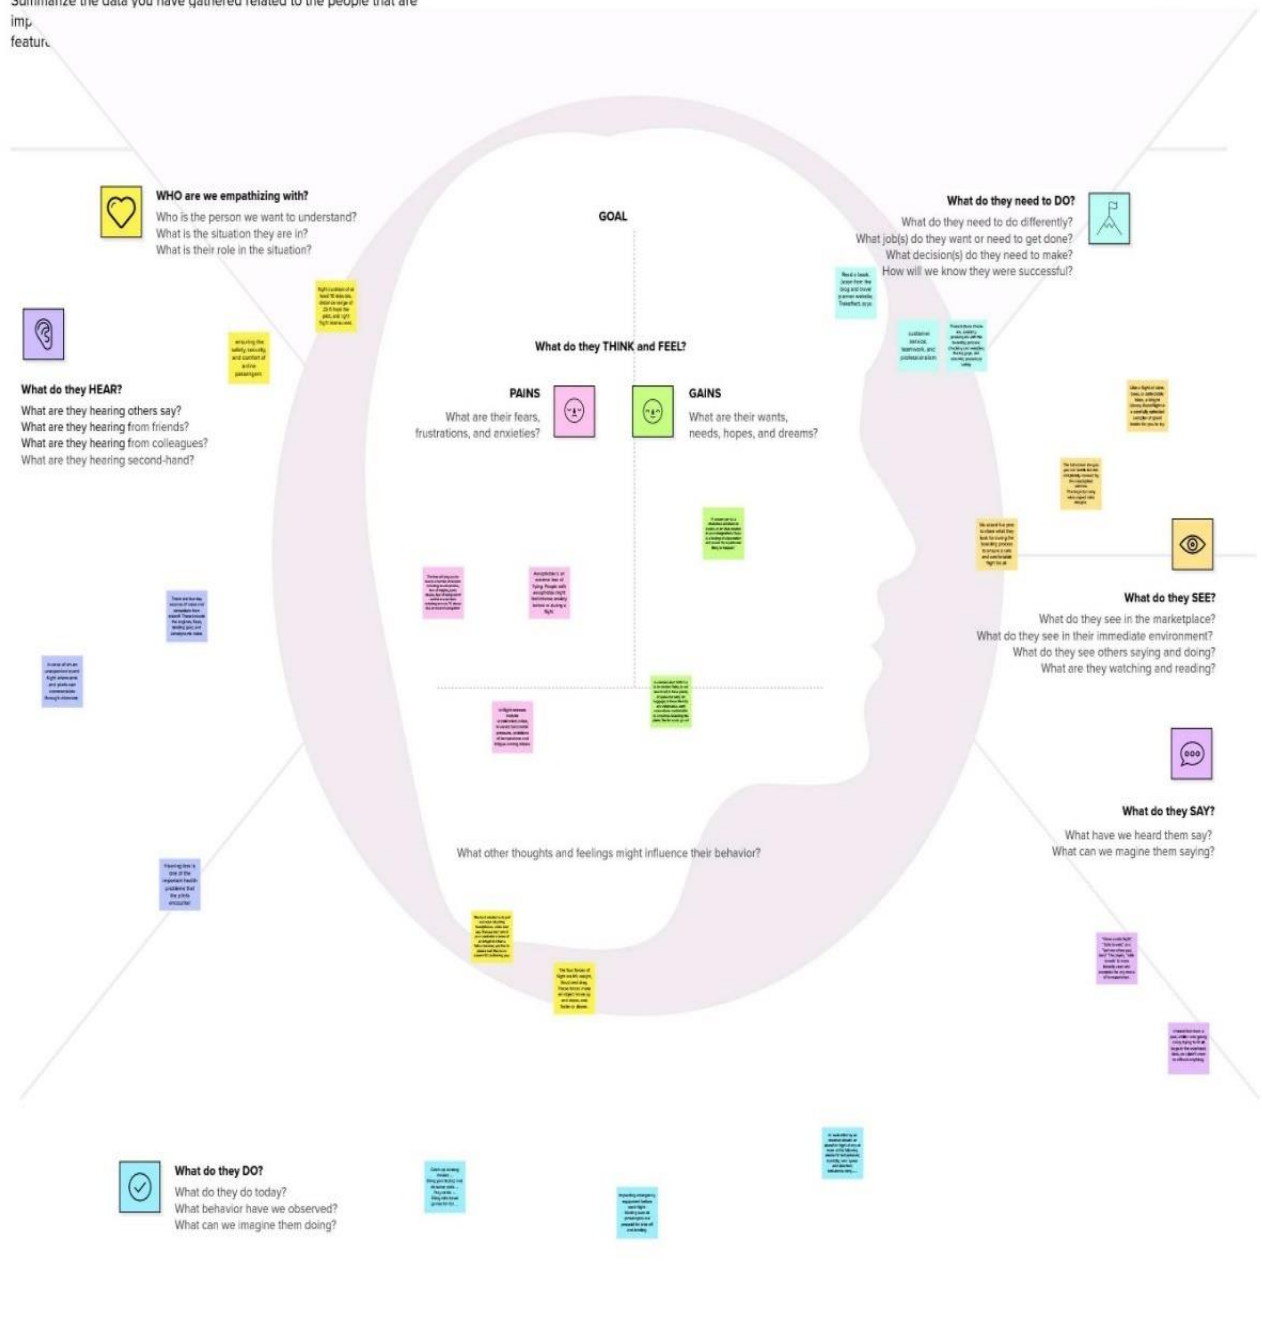

The relationship between the empathize and define stages can best be described in terms of analysis and synthesis. In the empathize phase, we use analysis to break down everything we observe and discover about our users into smaller, more manageable components—dividing their actions and behaviour into “what”, “why” and “how” categories, for example. In the define stage, we piece these components back together, synthesising our findings to create a detailed overall picture.

## 2.1 Empathy map

### Develop shared understanding and empathy

Summarize the data you have gathered related to the people that are important to your feature.

### Before you collaborate

A little bit of preparation goes a long way and this one is yours and yours to use to do the right thing.

15 minutes

### Define your problem statement

When you're not sure what to do, define your problem as a clear, specific statement. This is the focus of your "problem."

10 minutes

### Brainstorm

Write down any ideas that come to mind (no matter how silly or outrageous) to solve your problem.

10 minutes

### Group ideas

Now it's time to share your ideas with the group and let us help you refine your ideas. You can group your ideas into three groups: (1) ideas that are already in your mind, (2) ideas that are already in your mind, (3) ideas that are already in your mind.

10 minutes

### Prioritize

You have a lot of ideas, but you need to focus on the most important ones. Use the ideas that you have to determine what ideas are most important and what ideas are least important.

10 minutes

#### Team gathering

2-4 people, 15-20 minutes, 1-2 people, 15-20 minutes, 1-2 people, 15-20 minutes

#### Brainstorm

Write down any ideas that come to mind (no matter how silly or outrageous) to solve your problem.

#### Group ideas

Now it's time to share your ideas with the group and let us help you refine your ideas. You can group your ideas into three groups: (1) ideas that are already in your mind, (2) ideas that are already in your mind, (3) ideas that are already in your mind.

#### Define your problem statement

When you're not sure what to do, define your problem as a clear, specific statement. This is the focus of your "problem."

#### Brainstorm

#### Prioritize

You have a lot of ideas, but you need to focus on the most important ones. Use the ideas that you have to determine what ideas are most important and what ideas are least important.

### 3. RESULT

### 3.1-Data collection & Extraction from database

For the project the data was collected from Kaggle([www.kaggle.com](http://www.kaggle.com)). Data collection is the process of gathering and measuring information on variables of interest, in an established systematic fashion that enables one to answer stated research questions, test hypotheses, and evaluate outcomes and generate insights from the data.

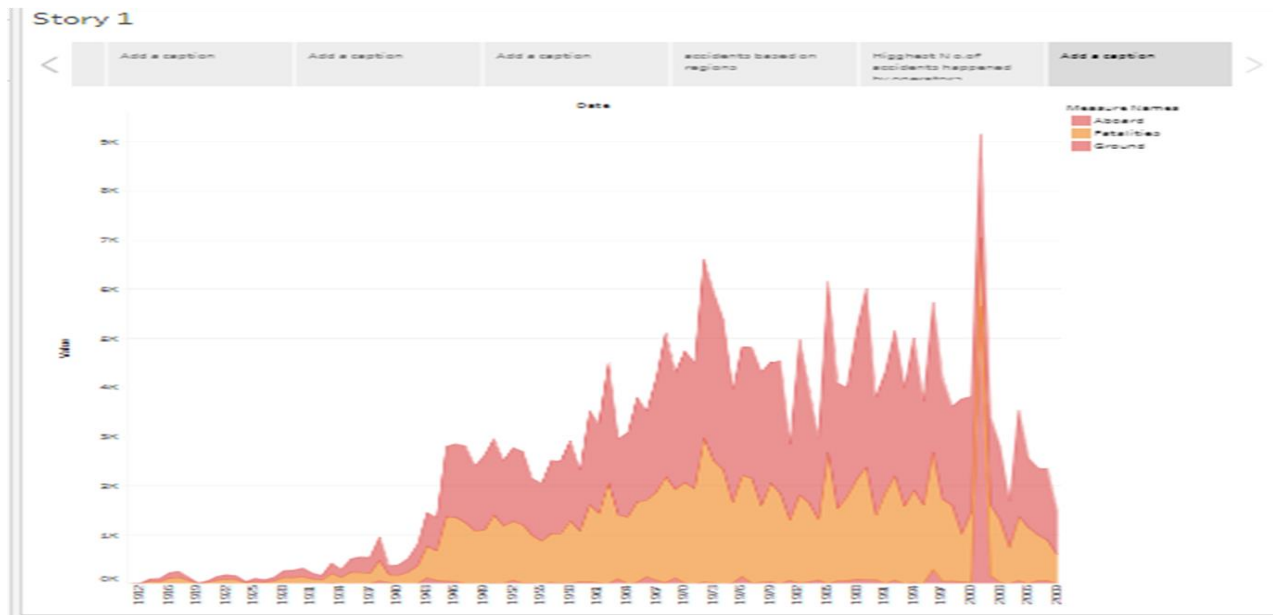

The dataset contains

1. Get familiar with the data
2. Explore summary statistics
3. Visualize the data
- 4 .Look for correlations
- 5 .Apply machine learning techniques

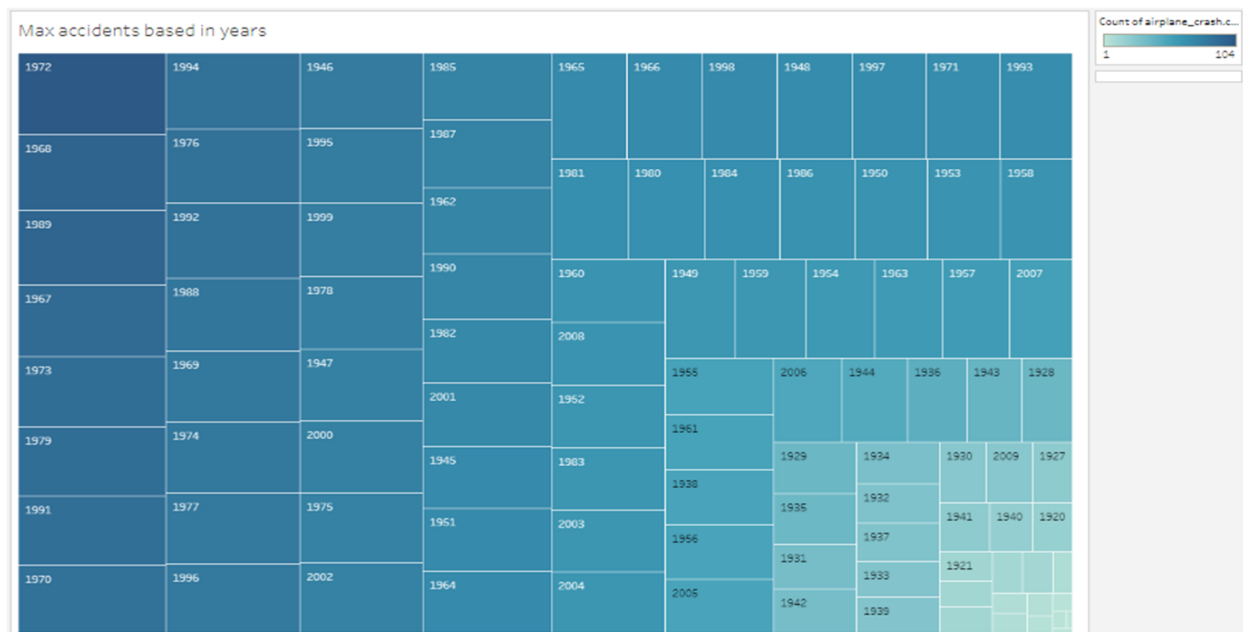

### **3.2 Data Visualization**

Data visualization is the process of creating graphical representations of data in order to help people understand and explore the information. The goal of data visualization is to make complex data sets more accessible, intuitive, and easier to interpret. By using visual elements such as charts, graphs, and maps, data visualizations.

### 3.2.1-Comparing aboard vs Fatalities vs ground

### 3.2.2-Max accident based on year

### 3.3.3-Accident happened in 1972 based on months

### 3.2.4-Highest no of accidents happened by operators

### 3.2.5-Top 10 locations which had more accidents

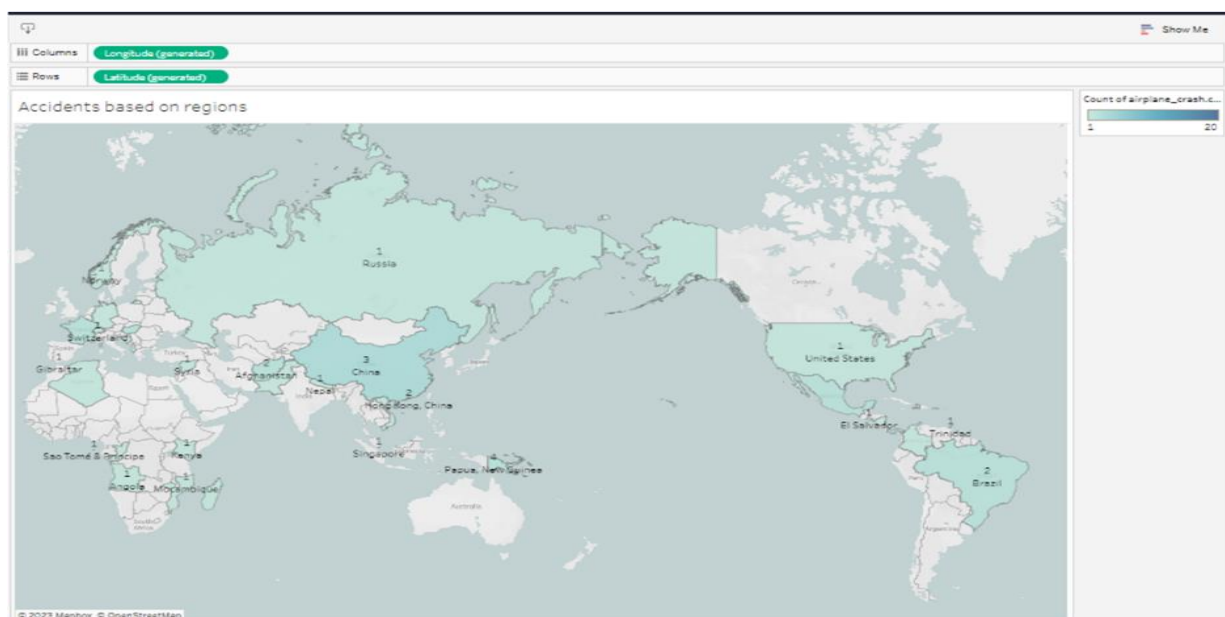

### 3.2.6-Top3 flight which have max accident history

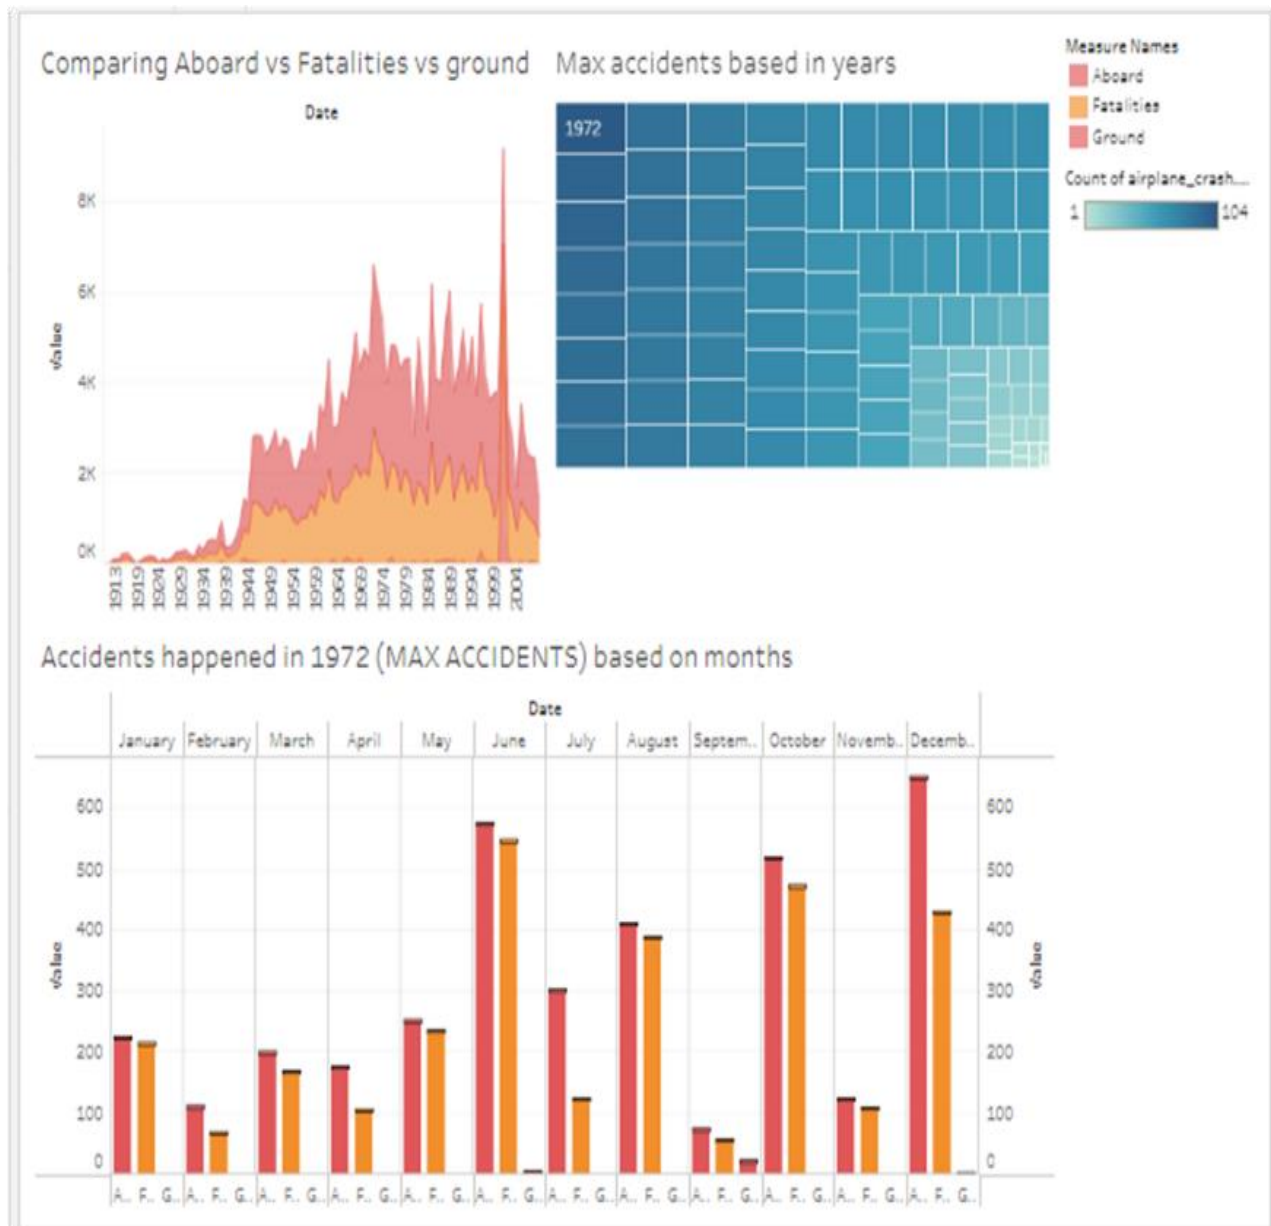

### 3.2.7-Accidents based on regions

### 3.3 Dashboard

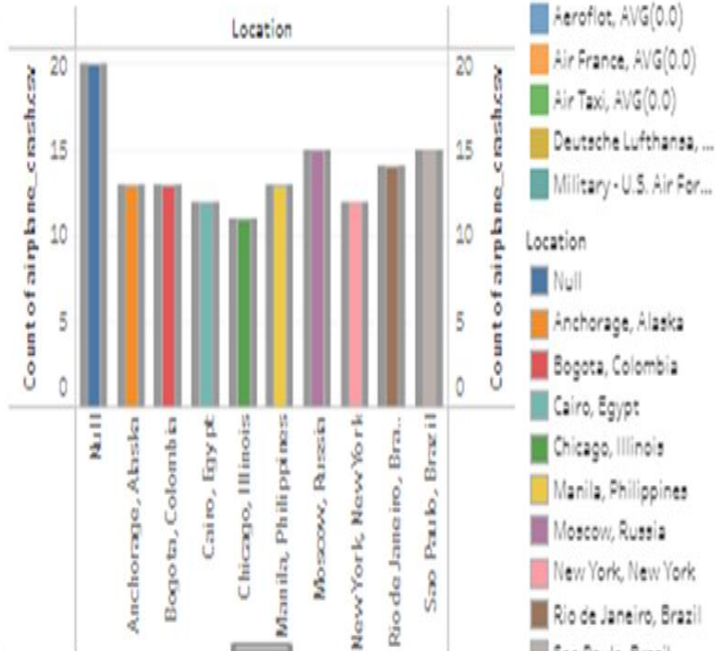

A dashboard is a graphical user interface (GUI) that displays information and data in an organized, easy-to-read format. Dashboards are often used to provide real-time monitoring and analysis of data, and are typically designed for a specific purpose or use case.

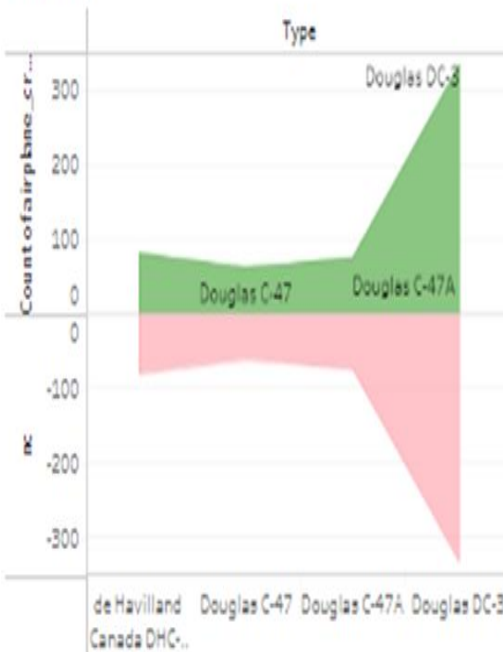

Highest no. of accidents happened by operators

Top 10 locations which had more accidents

Top 3 flights which have max accident history

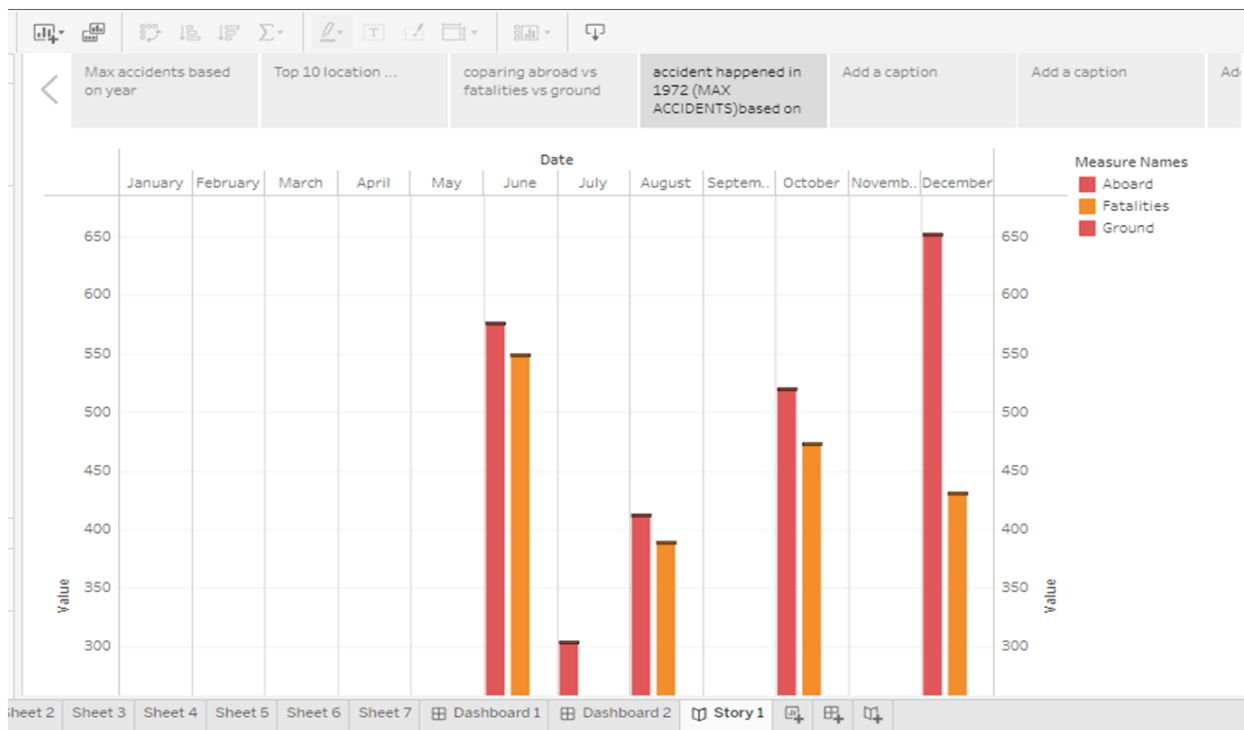

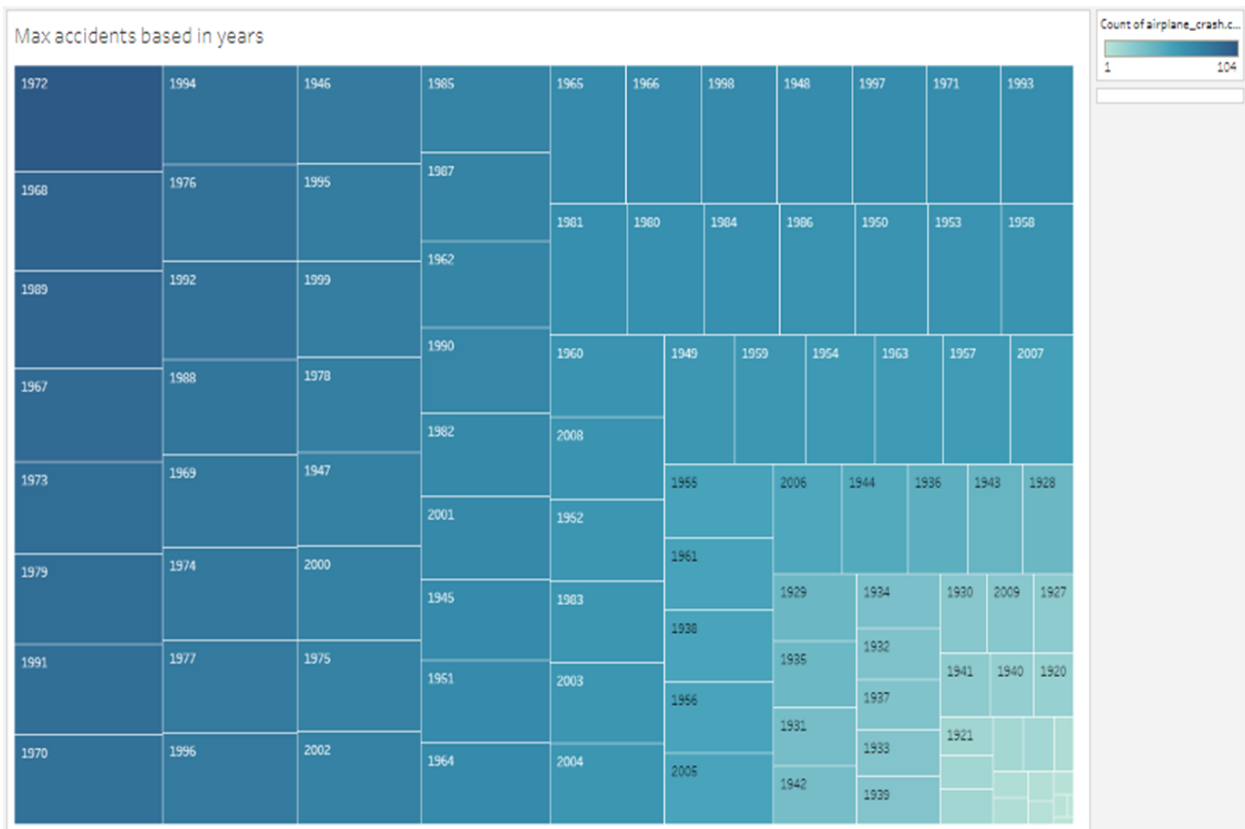

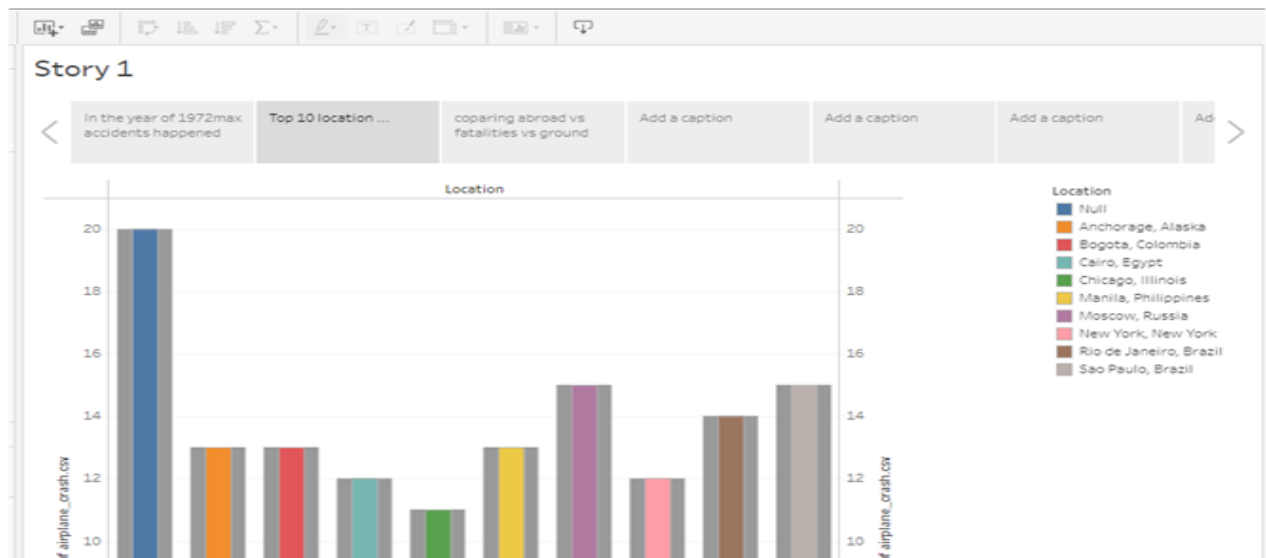

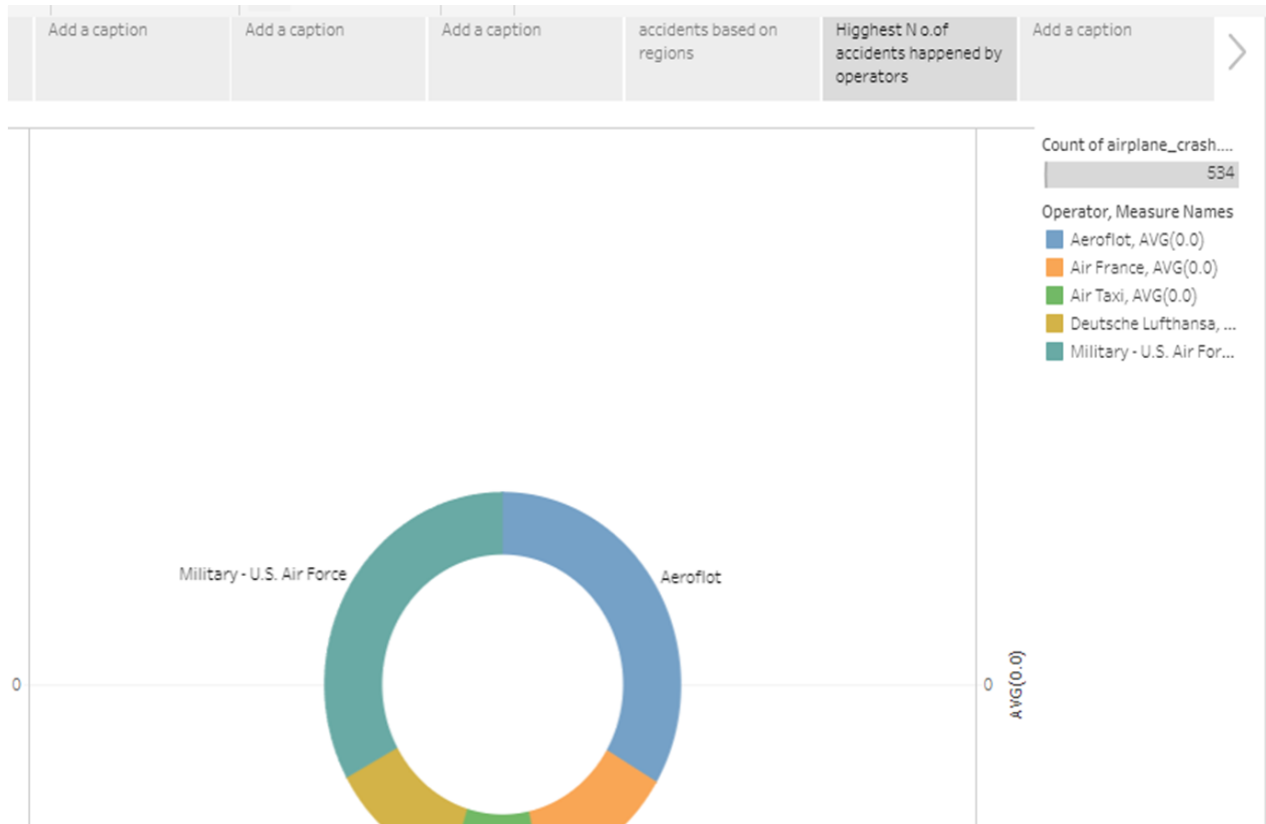

Accidents based on regions

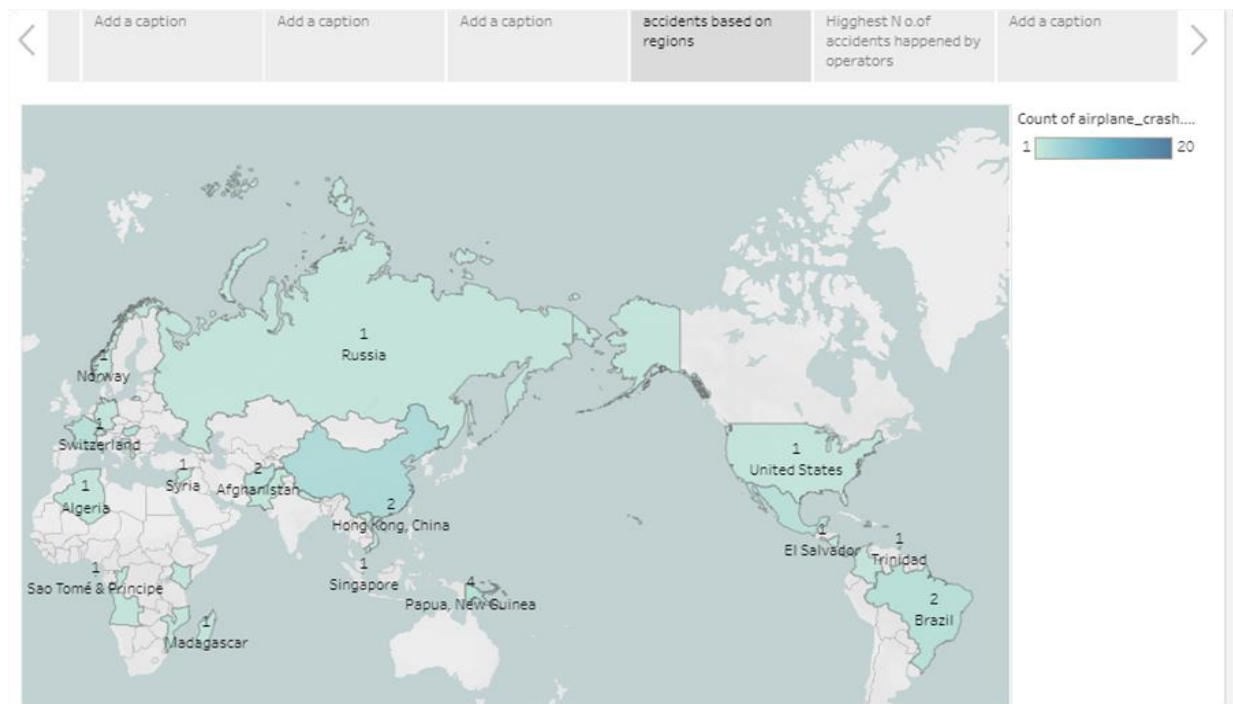

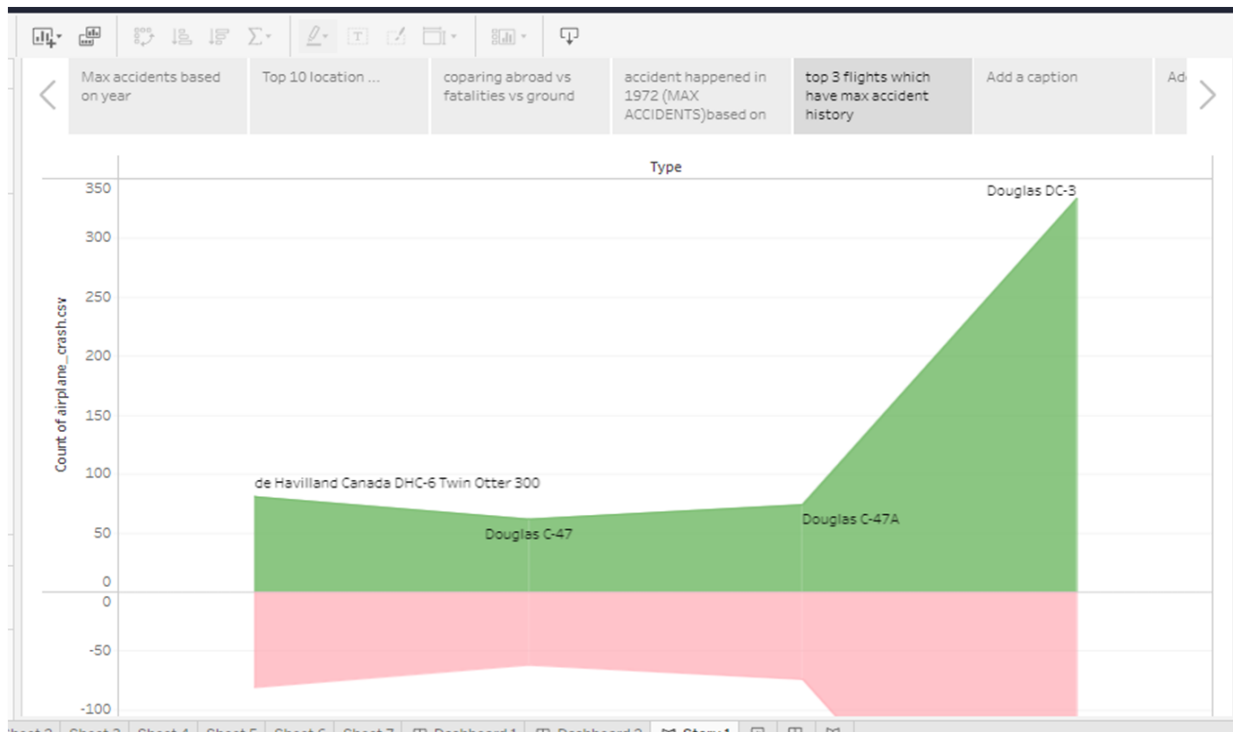

## 3.4 Story

## **4. ADVANTAGES & DISADVANTAGES**

### **Advantage:**

1. The main benefits are focused on the speed of the service, as well as reliability for delivery.
2. It can also be useful in cases where there is no space or equipment in maritime and in this way the client can be given a solution.
3. Provides valuable insights into the causes of airplane crashes, which can inform future safety measures and prevent similar incidents from occurring in the future.
4. The most convenient option, especially when traveling long distances. It can save you time and hassle, and get you where you need to go with minimal fuss.

### **Disadvantages:**

1. It Can Be Expensive Depending On The Route And Season.
2. Flying can be expensive, stressful and detrimental to the environment.
3. Can lead to increased scrutiny and negative publicity for airlines and other industry stakeholders.
4. Can be emotionally difficult for those involved in the analysis.

## **5.APPLICATION**

### **Investigation:**

The gathering of evidence and analysis of data to determine the cause(s) of the crash, including technical, operational, and human factors.

### **Recommendations:**

Based on the findings of the investigation, recommendations can be made to improve aviation safety, including changes to aircraft design, maintenance, crew training, and regulatory oversight.

### **Implementation:**

The adoption of recommended changes, either voluntarily by industry stakeholders or through regulatory action.

### **Follow-up:**

Monitoring of the effectiveness of implemented changes and ongoing evaluation of aviation safety practices.

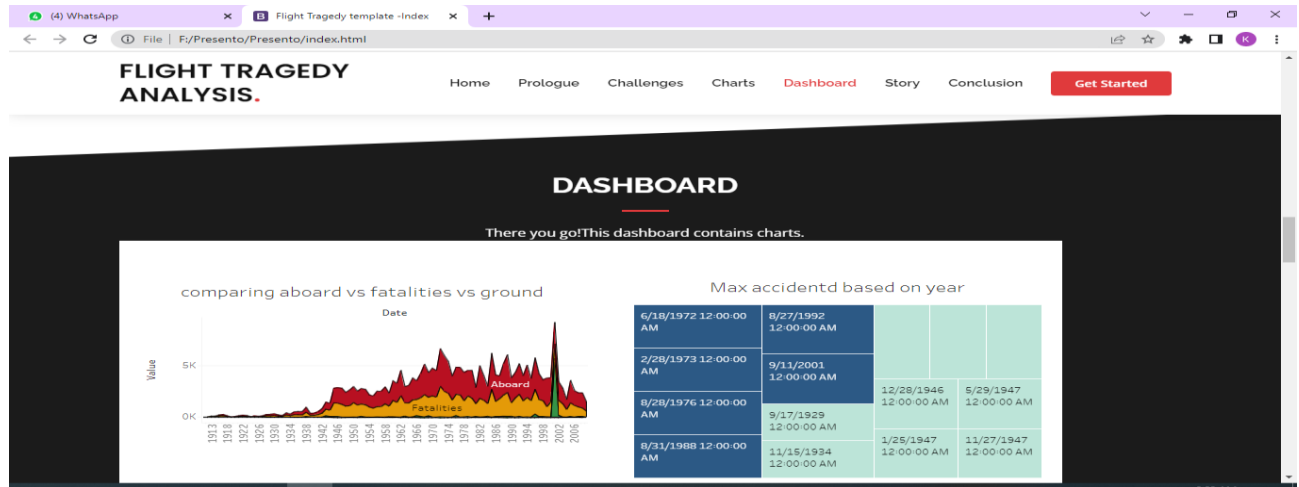

## **6.CONCLUSION:**

- The constant maintenance and repair of aircraft may seem like a trivial job but they can prove to be fatal if not done properly.
- A missing screw can jeopardize the whole aircraft.
- Lack of lubrication costed 88 lives, these are lessons the aviation industry learnt the hard way.
- Improving aviation safety and preventing tragic incidents from occurring in the future.
- While conducting a comprehensive crash analysis can be a challenging and emotional process and experts in the aviation of safety.

## **7.FUTURE SCOPE:**

The comprehensive crash analysis to fully understand the task at hand, stakeholders will need background knowledge on both the company and the project. Make the scope of work clear. Include branding. A recent report suggested that hydrogen-powered planes could enter the market and those planes could carry hundreds more passengers per flight than traditional planes, with a cleaner energy source. Additionally there will be more emphasis on training pilots to respond better to emergencies and unexpected situations.

## 8.WEB INTEGRATION

FLIGHT TRAGEDY ANALYSIS.

Home Prologue **Challenges** Charts Dashboard Story Conclusion [Get Started](#)

### CHALLENGES

Let us check some top flight tragedy

#### Weather-related challenges

Pilots must be trained to navigate through these conditions safely and to make decisions about when it is necessary to divert or delay a flight.

Weather conditions such as turbulence, thunderstorms, and snowstorms can pose significant risks to airplanes and their passengers.

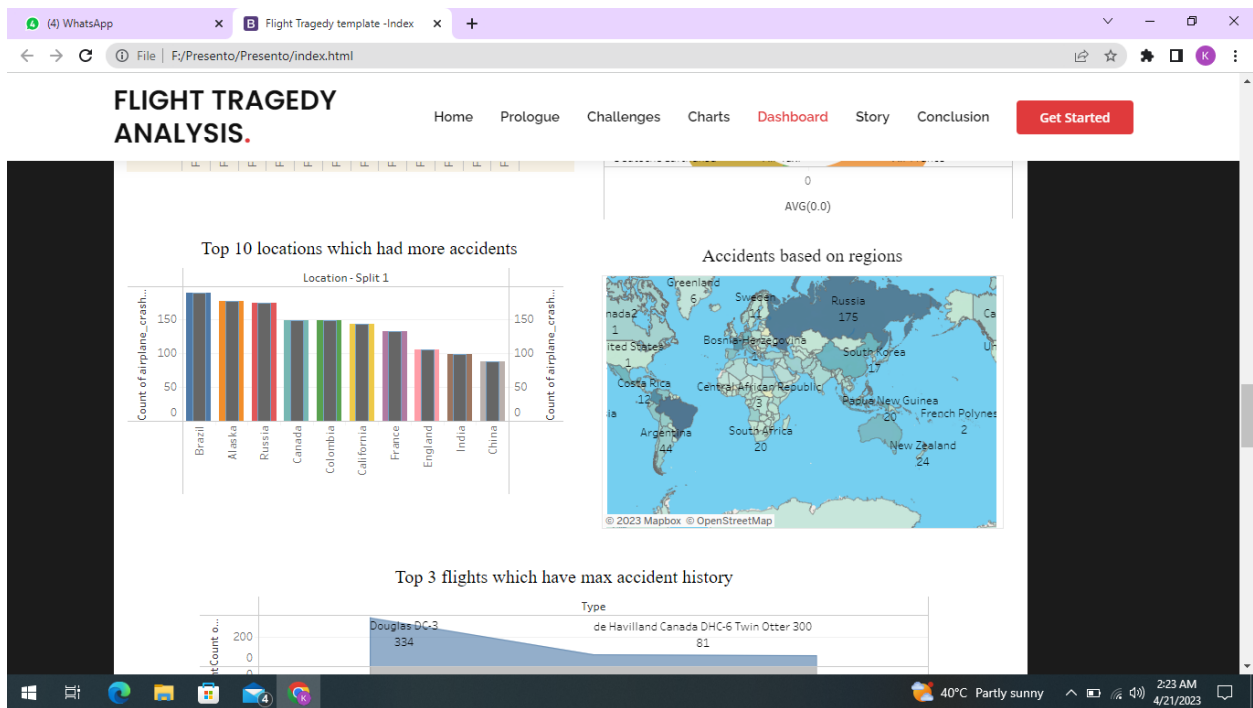

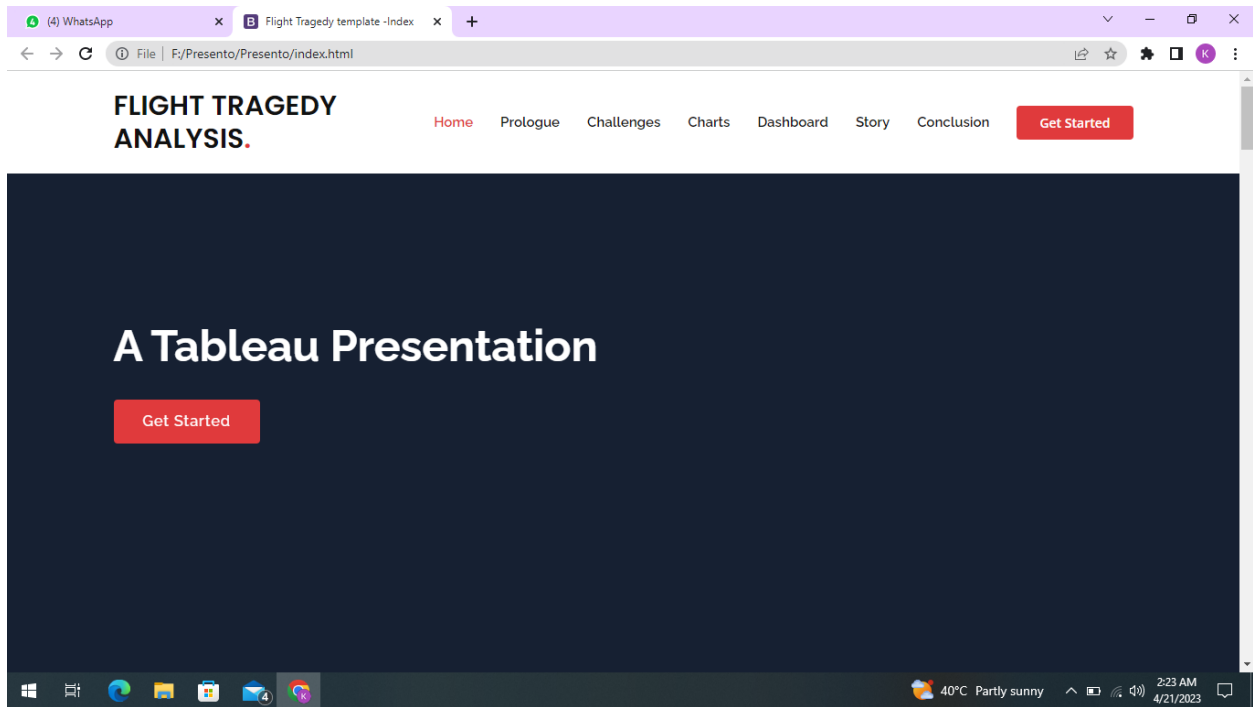

#### Mechanical failures

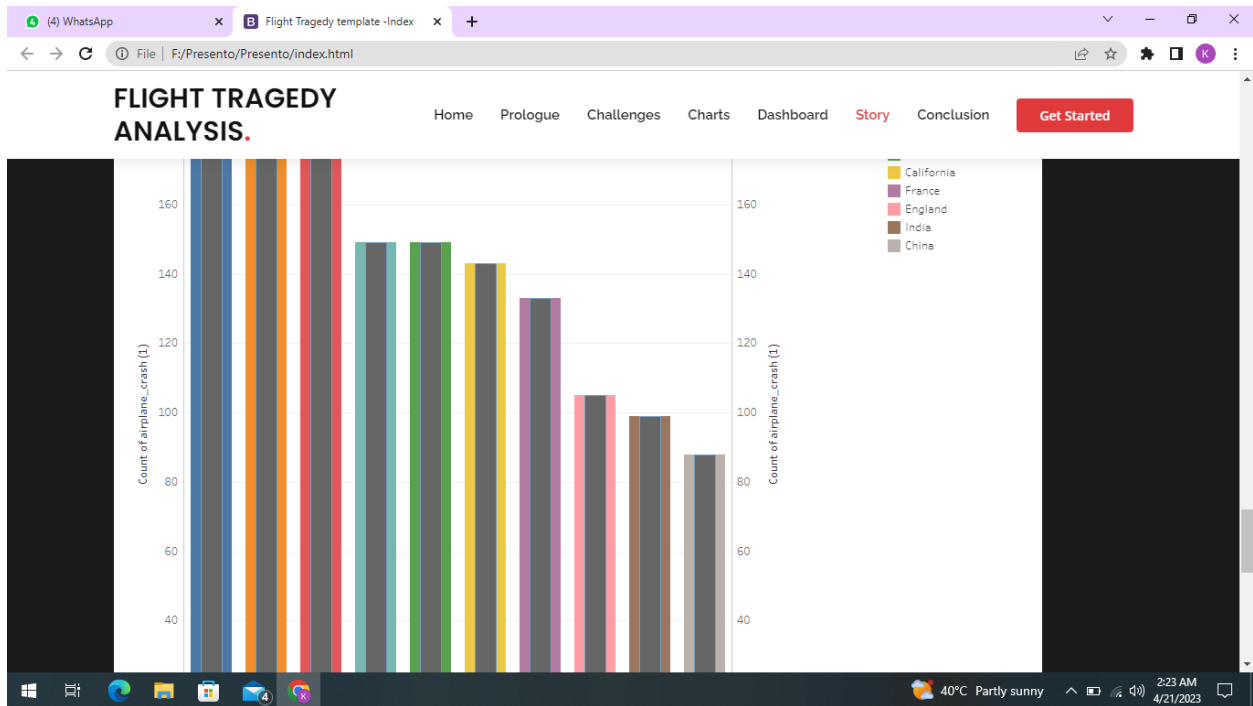

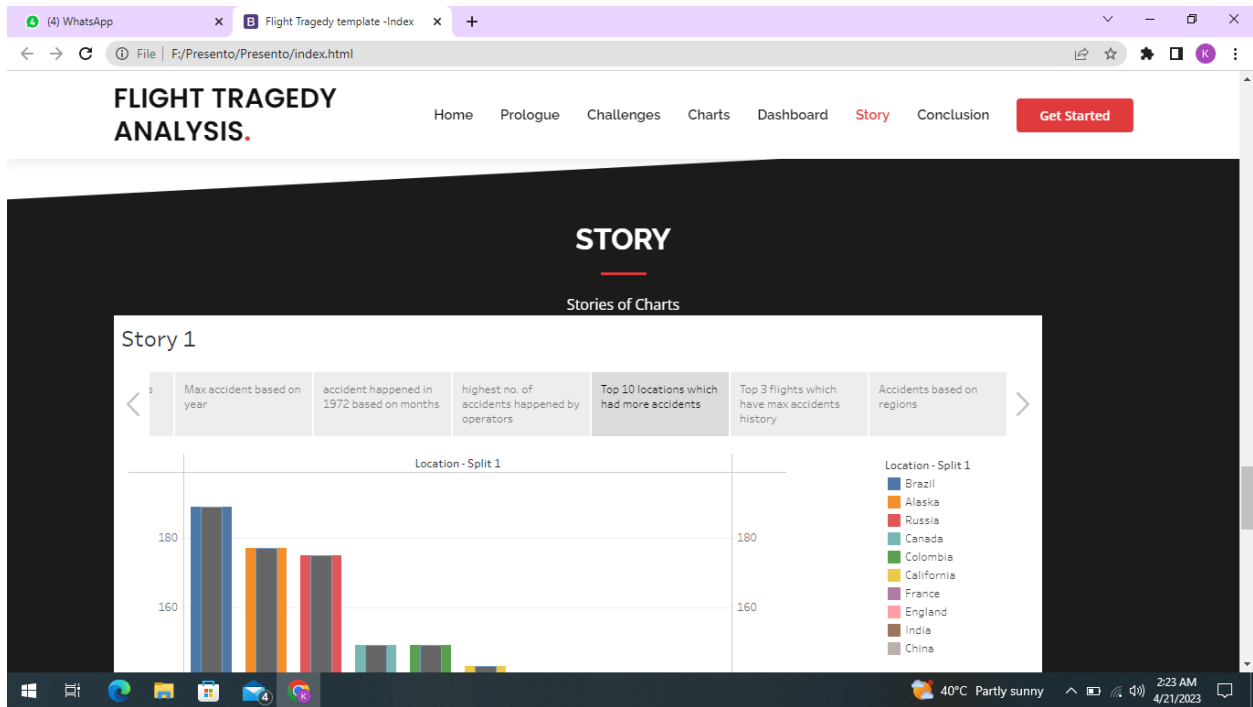

These failures can lead to catastrophic accidents, and it is important that airlines and manufacturers work to identify and fix potential issues before they cause harm.

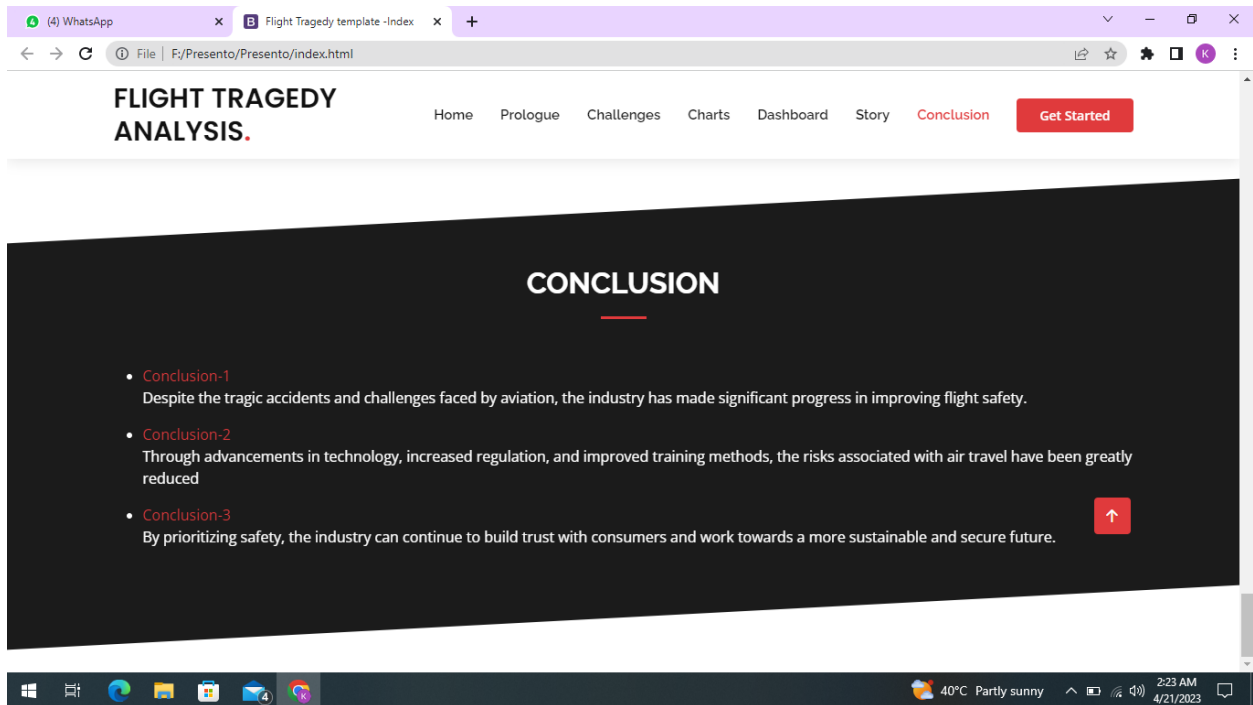

Mechanical failures in aircraft can occur due to a variety of reasons, including wear and tear, design flaws, or manufacturing defects.

#### Human error

#### Grand Theft Auto IV
